

INTRODUCTION

FonX products stand for protecting people and helping them to use their mobile devices in a healthy way.

Most mobile devices emit radiation in order to operate due to transmission signal around 900 MHz. Having a lengthy conversation on a mobile phone generally leaves our ear tired, irritated or hurt as a result of absorbing radiation. Our head and body also absorb radiation when we carry our mobile devices in our pockets or when we leave them hand reach away during our sleep.

Continuous absorption of radiation over time leads to risk of cancer, Alzheimer, Parkinson, memory loss, infertility, miscarriage, low sperm count, heart attack, migraine, sleep disorders, high stress and other negative effects. The solution is delivered by FonX, which will help to boost your performance, start fresh after a good night sleep, and protect your beloved ones.

TESTED AND CERTIFIED BY

WHAT IS FONX?

FonX is a brand name assigned to the innovative material used to shield against electromagnetic waves from electrical devices. The patented material is totally green and is made of various types of metals including silver and copper. It reduces SAR value up to 98% and helps to protect your health. The applications of our products are many, though at present FonX comes in two series only: Angel and Ghost, which are used for mobile devices.

FonX products have been tested and approved by the leading inspection organisations. They come in cases, tablets, wallets and belts (used for praying) and are made from plastic, leather or fabric. Their use has no influence on signal and battery life at all. Therefore, we do not add any antenna inside them and in this way ensure that no additional heat is generated, which may lead to negative effects over time.

PROTECTS HEALTH

Reduces exposure to electromagnetic radiation up to 98%

TOTALLY GREEN

Our material is made from metals including silver & copper

ADDITIONAL BENEFITS

Light, easy to use, no side effects, long shelf life, no battery required

PREVENTS SPYING

Protects private conversations from spy listening devices

QUALITY COMPLIANT

Approved by leading bodies: IMO, OEKO-TEX, COFRAC & TUBITAK

MARKET TESTED

Used by government, defense, businessmen & retail consumers

UNIQUE TECHNOLOGY

Innovative patented material successfully tested by EMITECH

FULL COMPATIBILITY

Works with all mobile devices, comes in different design & colour

WORK GUARANTEE

Comes with 2 years performance guarantee from manufacturer

MARKET MOBILE USE

Smart phones have become inseparable part of our community. The smart phone penetration in many countries has an exponential growth. People use their smart phones and wireless technology all the time. The end of 2013 offers the following statistics on mobile devices. These figures are growing year on year.

There are around 4.6 billion mobile users worldwide. Based on world population of 7.1 billion, this is almost 65% of global penetration.

There are 6.8 billion subscriptions worldwide, which account for 97% of global penetration. By the end of 2014 there will be more connections than people.

Currently, 56% of people own a smart phone. 50% of mobile phone users, use mobile as their primary internet source.

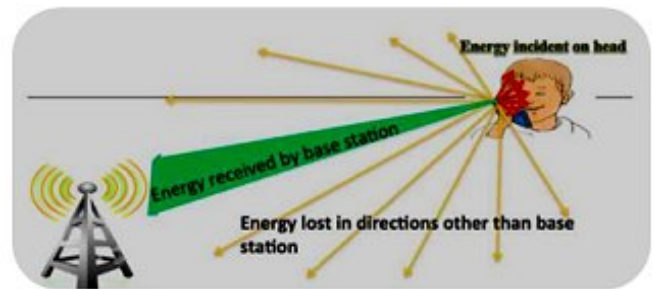

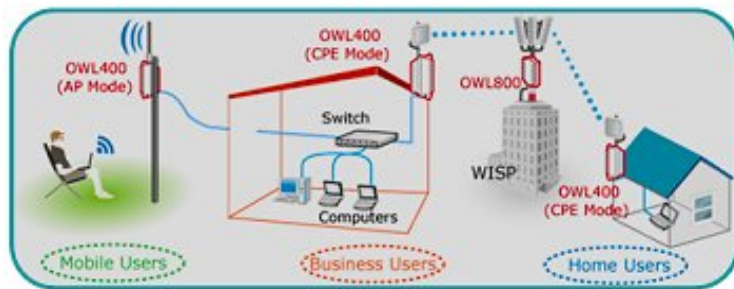

On average people spend 2.8 hours per day on the mobile device. That's over twice the amount of time they spend eating each day.

RADIATION EXPOSURE FROM MOBILE DEVICES

The time we spend using mobile devices increases year on year as mobile devices become more advance, more applications become available on the market, and we become more reliant on using mobile devices for socialising, searching, video, shopping, gaming and so on.

Some users of mobile devices have reported feeling several unspecific symptoms during and after its use; ranging from burning and tingling sensations in the skin of the head and extremities, fatigue, sleep disturbances, dizziness, loss of mental attention, reaction times and memory retentiveness, headaches, malaise, tachycardia, to disturbances of the digestive system.

WHY IS THERE A NEED FOR FONX CASES IN THE MARKET?

As the number of mobile devices increased in time and the pollution driven from radiation grew simultaneously, World Health Organisation (WHO) recommended that "consumers should consider ways of reducing their exposure".

Along with it, institutions and foundations adopted precautions regarding mobile device radiation and proposed legislation that would require devices to carry a label clearly stating the SAR value. Many steps are continuously being taken to improve that level of consciousness in this matter. Soon the law would require city retailers to inform customers about the possible dangers of cell phone radiation.

ABOUT US

FonX has been developed by our innovation team. Our production facility is currently based in Turkey. FonX products are exported from Turkey by our trading company Innova Import Export Trade Ltd, which is based in Istanbul. This company is also part of CTN Centre Group.

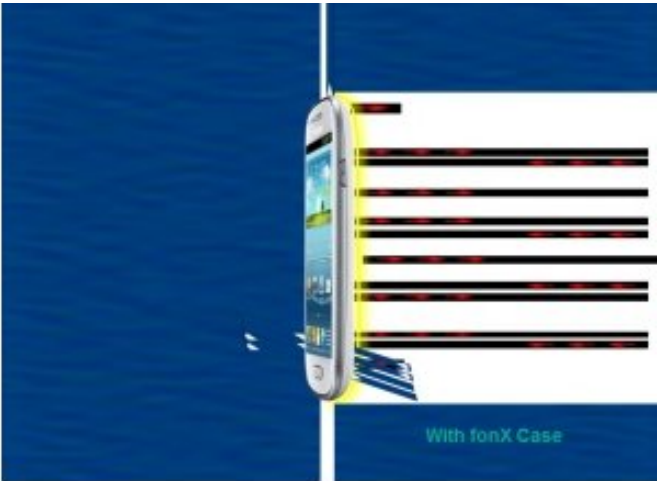

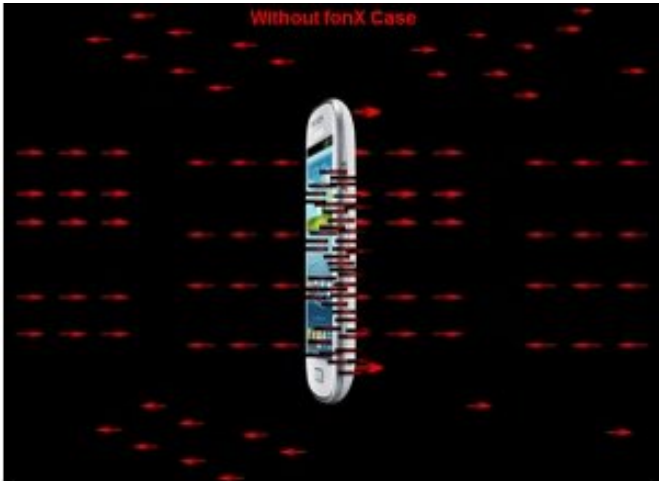

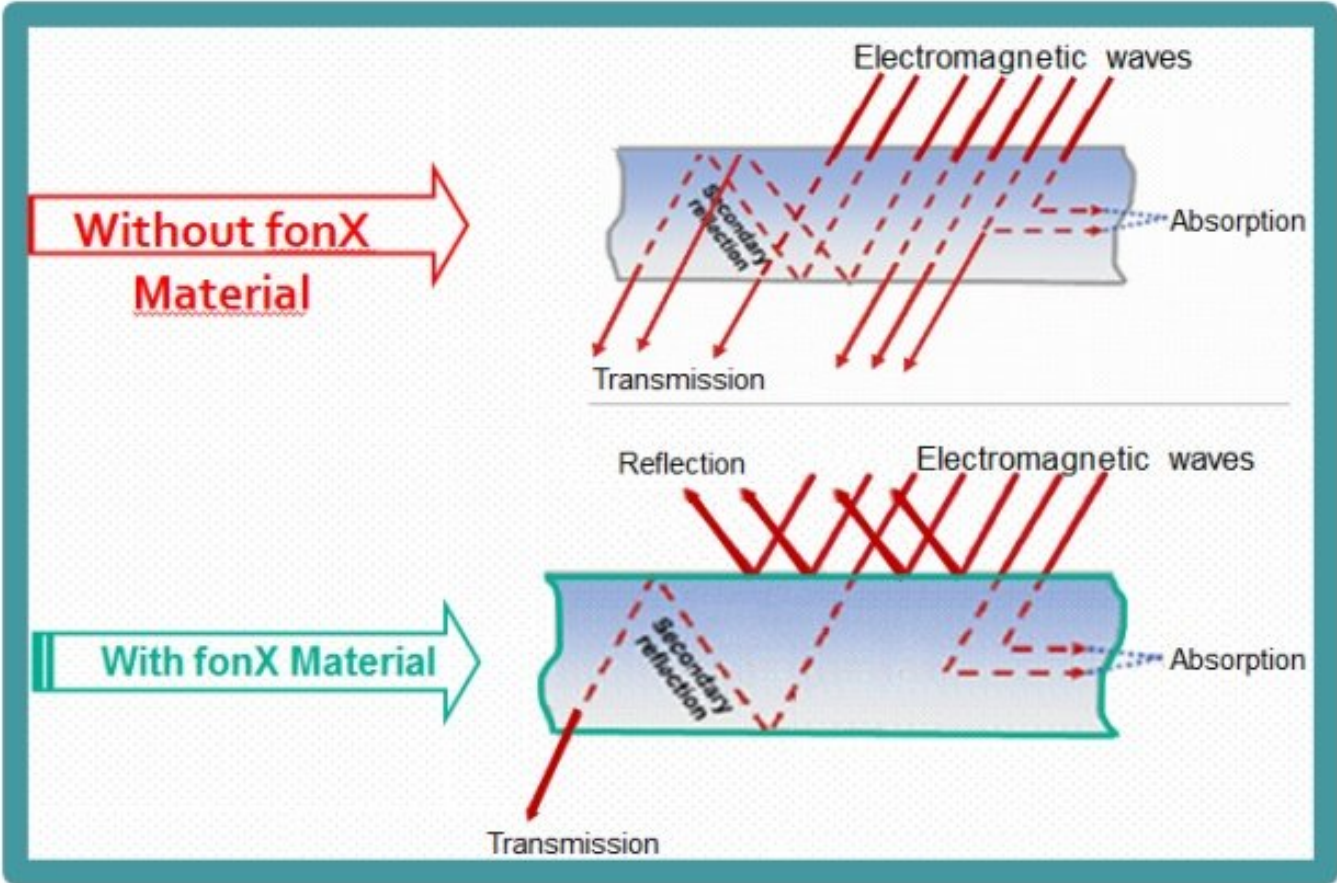

In developing our unique material, our main focus was on reducing SAR value to its maximum possible level. We have achieved successful results. FonX cases reduce SAR value up to 52% when a mobile is in use and up to 98% when it's not. To our knowledge, this is the highest percentage that no other case in the world can supersede. Not only that, our Ghost series, for example, have no analogue at this time. These series in particular have found high interest from businessmen and government officials.

HOW DOES FONX TECHNOLOGY PROTECT?

HOW DOES FONX TECHNOLOGY WORK?

FonX reduces exposure to radiation using shielding technology. The case, which contains patented material inside simply reflects the electromagnetic waves away from it.

ANGEL SERIES

With Radiation Shield Technology, FonX Angel cases reduce exposure to radiation, absorbs and redirects it away from your head and body to protect your health. This is why we call it Angel. Specific absorption rate (SAR), which is a measure of the rate at which energy is absorbed by the human body when exposed to a radio frequency (RF) electromagnetic field - goes down (depending on the model) from 52% to 98% as a direct result of FonX Angel use.

★★★★★ SHIELDS AGAINST RADIATION, PROTECTS YOUR HEALTH ★★★★★

GHOST SERIES

Apart from Radiation Shield Technology, with its unique Anti-Spying feature, our device protects private conversations and keeps eavesdroppers off. Conversations may routinely be intercepted and recorded by spy satellites and radio wave listening devices. Any mobile device can be connected to externally and be used as a microphone, which means that a third party can listen to your conversation while your mobile remains in your pocket, for example.

To secure your conversation, all you need to do is to simply put your mobile inside Fonx Ghost wallet to kill off a signal. As an example, when you receive a call while you are underground in a metro, your mobile normally still plays a message to a caller that you are currently unreachable. However, when you use FonX Ghost, no message is played at all as your mobile does not exist. In other words you become a Ghost.

★★★★★ PREVENTS SPYING, PROTECTS YOUR HEALTH ★★★★★

RETAIL OPPORTUNITY

In the age of mobile devices, FonX is a needed product that helps people in everyday life. We invite distributors and wholesalers to take FonX to their local market, help consumers and get joint rewards. The profit margins are healthy and the deeds are good. With the rise of FonX's awareness, its growth potential is huge. Let's use this opportunity and work together to make a greater achievement.

The key benefits of FonX are its ability to reduce radiation up to 98% and to prevent spying. It's a practical product that helps to protect health and offers security. FonX is compatible with all mobiles and tablets. Its cases are durable, light, and have no side effects. The technology has been patented, tested and certified. We are able to produce cases in different design, style and colour to meet customer's preference. We are flexible in our approach and are keen to develop our product range further.
